W. Wehrmeyer, Marburg
H. Ziegler, München

Assistants to the Editors:

W. Hensel, Bonn
S.K. Hillman, Glasgow

Springer-Verlag Berlin Heidelberg New York Tokyo

Planta An International Journal of Plant Biology

Founded in 1925. Volumes 1–34 (1945) edited by *W. Ruhland* and *H. Winkler*. (Volumes 1–21, 1934 published as „Zeitschrift für wissenschaftliche Biologie", Abteilung E.) Volumes 35–47 edited by *W. Ruhland* and *O. Renner*. Volumes 48–51 edited by *W. Ruhland, L. Brauner* and *E. Bünning*. Volumes 52–68 edited by *L. Brauner* and *E. Bünning*

Copyright

Submission of a manuscript implies that the work described has not been published before (except in the form of an abstract or as part of a published lecture, review or thesis), that it is not under consideration for publication elsewhere, that its publication has been approved by all the authors and by the responsible authorities – tacitly or explicitly – in the laboratories where the work was carried out and that, if accepted, it will not be published elsewhere in the same form, in either the same or another language, without the consent of the copyright holders. By submitting a manuscript, the authors agree that the copyright for their article is transferred to the publisher if and when the article is accepted for publication. The copyright covers the exclusive rights to reproduce and distribute the article, including reprints, photographic reproductions, microform, electronic data-base, video-disks, or any other reproductions of similar nature, and translations.

Photographic reproduction, microform, electronic data-base, video-disks, or any other reproduction of text, figures, or tables from this journal is prohibited without permission obtained from the publisher.

The use of general descriptive names, trade marks, etc., in this publication, even if the former are not specifically identified, is not to be taken as a sign that such names are exempt from the relevant protective laws and regulations.

While the advice and information in this journal is believed to be true and accurate at the date of going to press, neither the authors nor the editors nor the publisher can accept legal responsibility for any errors or omissions that may be made. The publisher makes no warranty, express or implied, with respect to the material contained herein.

Special Regulations for the USA

Photocopies may be made for personal or internal use beyond that permitted by Section 107 or 108 of the U.S. Copyright Law, provided a fee is paid. This fee is $0.20 per page or a minimum of $1.00 if an article consists of less than five pages. Please pay this fee to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA, stating the ISSN 0032-0935, volume, and first and last page numbers of each article copied.

The copyright owner's consent does not extend to copying for general distribution, for promotion, for creating new works, or for resale. Specific written permission must be obtained from the publisher for such copying.

Other Regulations

Authors of this journal can benefit from library and photocopy fees collected by VG WORT if certain conditions are met. If an author lives in the Federal Republic of Germany or in West Berlin it is recommended that he contact Verwertungsgesellschaft WORT, Abteilung Wissenschaft, Goethestrasse 49, D-8000 München 2, for detailed information.

Cell enlargement 103
Cell fusion, electric-field induced 199
Cell polarity 458
Cell, single cell analysis 199
Cell wall (antigenicity) 82
Cell wall (composition) 166
Cell wall, proteins 422
Chlamydomonas 82, 288, 517
Chlamydomonas (agglutination) 403
Chlorophyll a/b-binding protein 487
Chlorophyll degradation 309
Chlorophyta 82
Chloroplast 442
Chloroplast development 134, 329
Chloroplast DNA 487
Chloroplast, etio- 259
Chloroplast (maltose metabolism) 179
Chloroplast membranes 35
Chloroplast (O_2^- production) 185
Chlorotetracycline 473
Cholesteryl hemisuccinate 35
Clivia 70
Cold shock 194
Crown gall 410
Cucumis 76
Cucurbita 560
Cucurbitaceae (phloem protein) 119
Cutin synthesis 70
Cyanobacteria 384, 451
Cyanobacteria, symbiotic 157
Cyclic AMP 560
Cytochrome (b type) 51
Cytokinin habituation 272
Cytokinin (polypeptide regulation) 410
Daucus (cell-wall composition) 166
Dehydroascorbate reduction 442
Dihydroxyphenylalanine 482
Dioclea (lectin) 63
Dionaea 312, 458
Egeria 320
Elastic modulus 230
Elongation gradient 398
Endoplasmic reticulum 140, 458
Enzyme degradation 550
Enzyme secretion 1
Ethane formation 392
Ether lipid 111
Ethoxyzolamide 27
Ethylene and amino acids 437
Etio-chloroplast 259
Euglena 249
Fatty acid, free 194
Flagellum 403, 517
Fluorescent probe 320
Gamete 517
Gene regulation 501
Genome expression 42
Germination (alkaloids, allelopathy) 365
Gibberellin 1
Gibberellin and protein synthesis 16
Gibberellin and protoplast swelling 416
Gibberellin (gravitropism) 339
Gibberellin (sensitisation in aleurone) 264
Gland, digestive (*Dionaea*) 312
Glucan synthase 534
Glutamine and glutamate formation 384
Glutathione dehydrogenase 442
Glutathione metabolism 442
Glycine (lectin) 108, 128
Glycollate oxidation 469
Glycolysis 54
Glycoprotein (cell wall) 422
Glycoprotein (sexual agglutination factor) 403
Glyoxylate decarboxylation 469
Golgi apparatus 140, 534
Gravitropism (growth regulators) 339
Gravity and hypocotyl curvature 76
Growth (root) 398
Habitutation 410
Helianthus 76, 339
Hemagglutinating proteins 128
Hexokinase 152
Hordeum (acylcarnitine synthesis) 259
Hordeum (chlorophyll accumulation) 134
Hordeum (enzyme secretion) 1
Hordeum (protein degradation) 550
Hordeum (root, water transport) 237
Hydraulic conductivity 230, 237
Hydrilla 27
Hydroxycinnamate: CoA ligase (tissue distribution) 225
Hydroxyproline-containing protein (cell wall) 422
Hypocotyl hook formation and opening 76
Inosine diphosphatase 534
Ions, group II 320
Isocitrate lyase 16
Lactuca 35, 365
Leaf (CO_2 exchange) 349
Leaf growth 70
Leaf (hexokinase) 152
Leaf senescence 185
Leaf tissue (osmotic stress) 302
Lectin 119, 140
Lectin (isolation, characterisation) 63
Lectin release 108
Lepidium 76
Light and chlorophyll loss 309
Light and polypeptide synthesis 249
Light, chloroplast development 134
Light scattering (leaf) 349
Lignification 225
Lilium 422
Lipid fluidity (membranes) 35
Lipid metabolism 111
Lupinus 365
1-(Malonylamino)cyclopropane-1-carboxylic acid 437
N-Malonyl-D-methionine 437
Maltose 179
Maltose phosphorylase 179
Manganese 216
Mastigocladus (cyanobacterium) 451
Mechanoreceptor cell (plant) 458
Membrane, flagellar 517
Membrane lipids 35
Membrane transport 205
Methionine 437
Methionine (metabolism) 540
Mitochondrion 152, 175, 194
Molecular size (lectin) 63
Monoclonal antibody 369
Moss protonemata 357
mRNA 16
mRNA (light-regulated, sequence complexity) 42
Mucuna 482
Mutant (*Agrobacterium*) 272
Mutant (*Chlamydomonas*) 517
Mutant (*Euglena*) 249
Myriophyllum 27
NADPH-protochlorophyllide oxidoreductase 134

Nicotiana (callus), auxin binding 10
Nicotiana (cell transformation) 272
Nicotiana (kinetin and protein synthesis) 410
Nicotiana (plastids) 329
Nitrate, nitrite utilization 288
Nitrite reduction 97
Nitrogen metabolism 377
Nostoc 157, 384
Oxygen (superoxide) 185
Palmitoylcarnitine 259
Pentose-phosphate pathway 97
Periderm membranes 294
Peroxisome 216
pH patterns 398
Phaseolus (transport of protein) 140
Phloem exudate and protein 119
Phloem unloading 205
Phosphoenolpyruvate carboxylase 302
Phosphoribulokinase 281
Phosphorylase 428
Phosphotransferase 111
Photorespiration 27, 349, 469
Photosynthesis and O_2^- production 185
Photosynthesis (transitory starch) 428
Photosynthesis (water stress) 302, 349
Photosystem II (freeze fracture) 451
Phototaxis 54
Phototransduction 54
Phototropism (moss) 357
Phycobilisome 451
Phycomyces 51
Physarum 54
Physcomitrella 357
Phytochrome 416
Phytochrome (moss) 357
Phytochrome (polysome assembly) 501
Phytochrome (radioimmunoassay) 369
Phytochrome (RNA levels) 487
Phytohemagglutinin 140
Pisum (acetylcarnitine) 175
Pisum (genome expression) 42
Pisum (hexokinase) 152
Pisum (light and RNA) 487
Pisum (maltose metabolism) 179
Pisum (nitrite reduction) 97
Pisum (photorespiration) 469
Pisum (phytochrome) 369
Pisum, secretory vesicles 534
Pisum (Superoxide dismutase) 216
Pisum (thylakoid membranes) 35
Plastid 97
Plastid (division, DNA, ultrastructure) 329
Polarotropism (moss) 357
Pollen 422
Polypeptide coding 249
Polyphenol 458
Polysaccharide, non-cellulosic 166
Polysome 16
Polysome assembly 501
Populus 225
Primula 349
Prochloron 281
Protein body 140
Protein degradation 550
Protein, phloem 119
Protein phosphorylation 560
Protein synthesis 16
Protein synthesis (cytokinin regulation) 410
Protochlorophyllide/chlorophyllide conversion 134
Proton efflux 398
Proton pump (sodium stimulated) 103
Protoplast 264, 329
Protoplast immobilisation 392
Protoplast (photorespiration) 469
Protoplast (swelling) 416
Radical, free 185
Reductant donation 97
Reductive pentose-phosphate cycle 281
Renografin gradient 534
Reproduction (*Chamydomonas*) 82
Respiration 54
Respiration (water stress) 302
Rhizoid 473
Ribonuclease activity 16
Ribosome 501
Ribulose bisphosphate carboxylase 281, 487
Ricinus 16
Riella 473
RNA levels, light 487
RNA synthesis 501
Root (cell wall) 422
Root (growth, surface pH) 398
Root lectin 108
Root pressure 237
Root (water transport) 230
Salix 512
Secale (cold shock) 194
Secretory vesicle 534
Seed coat 205
Seed development 205
Senescence 550
Senescence, leaf 185, 309
Senescence (protoplasts) 392
Sexual reproduction 403
Sieve elements 512
Sinapis (phytochrome) 501
Solanum, periderm 294
Soybean agglutinin 128
Soybean cultivar 128
Spinacia (ascorbate metabolism) 442
Spinacia (starch degradation) 428
Sporangiophorogenesis 51
Starch breakdown 179
Starch metabolism 428
Sterol, incorporation into membranes 35
Storage protein 140
Stress and protein degradation 550
Suberin 294
Sucrose (loading and source) 512
Superoxide anion 185
Superoxide dismutase 216
Symbiosis 384
Symbiosis, reconstitution 157
Symplast 320
Temperature (cold) 194
Thylakoid (freeze fracture) 451
Tissue culture, biochemical dedifferentiation 377
Tissue culture (kinetin effect) 410
Transport (cell to cell) 237
Transport (protein) 140
Transsulphuration 540
Triticum (α-amylase) 264
Triticum (cold shock) 194
Triticum (protoplast swelling) 416
Triticum (water transport) 230
Tuber 294
Turgor pressure (root) 230
Vacuole 458
Vicia 339
Vicia (phloem unloading) 205
Vigna 437, 487
Water permeability 294
Water stress (photosynthesis) 349
Water stress (photosynthesis, respiration) 302
Water transport 230, 237
Wood 512
Zea (gravitropism) 339
Zea (root growth) 398

Planta An International Journal of Plant Biology

Instructions to authors

1. General

Manuscripts should be typewritten, double-spaced *throughout*, with wide margins, and should be submitted in *duplicate* (original and a carbon or photocopy).

Papers should be clear and concise and should be written in correct English, this being the responsibility of the authors.

Short papers making one single interesting point may be published out of order as *Short communications*. Maximum length is two printed pages, including tables, etc. (One printed page equals three typescript pages.) The decision as to whether a paper qualifies as a *Short communication* rests with the editors.

To accelerate publication only **one set of proofs** is sent to the authors. This shows the final layout of the paper as it will appear in the journal. It is therefore essential that manuscripts are submitted in their final form, ready for the printer, and that the approximate desired positions of figures and tables are marked on the margins. Proof reading should be limited to the correction of typographical errors. Any other changes involve time-consuming and expensive work. If absolutely necessary and space permitting additions may be made at the end of the paper in a *Note added in proof*.

2. Text

To become familiar with the general layout of articles published in *Planta*, please consult a recent issue of the journal.

Abstract. All papers including *Short communications* should be preceded by an abstract which should state the plant material and EC numbers.

Key words. Authors should suggest key words (not more than six – following the abstract and in alphabetical order) characterizing the scope of the paper, the principal plant materials, and the main subjects of the work.

Running title. A running title should be suggested by the author(s) (not to exceed 75 letters and intervals).

Headings. Main headings (Introduction, Material and methods, etc.) should be placed on separate lines.

Small print. Footnotes, Material and methods sections, Acknowledgements, References, tables, and legends for illustrations should be marked for small print.

Genus and species names and words to be emphasized should be underlined singly, for *italics*.

Units and symbols. Temperatures may be expressed in degrees Celsius, time in seconds (s), minutes (min), hours (h), days (d), etc. Otherwise, the *International System of Units* (SI, Système International d'Unités) should be used wherever possible. (Consult, e.g., U.S. Department of Commerce, National Bureau of Standards, Special Publication 330, *The International System of Units*, latest edition, or Rotter, F. (1979) Das Internationale Einheitensystem in der Praxis. Physik in unserer Zeit **10**, 43–51)

Abbreviations. For correct usage of abbreviations authors should consult the list of *Units, symbols, abbreviations* printed in the first issue of each volume.

Footnotes in the text should be numbered consecutively and should be used sparingly.

Literature citations in the text should be by author(s) and year. Where there are more than two authors, only the first should be named, followed by "et al.".

Examples: Iino (1982) has shown that ... Experiments in this laboratory (Iino 1982) have shown that ... Harris et al. (1982) have shown that ...

The list of **References** should include only publications cited in the text. They should be cited in alphabetical order under the first author's name, listing all authors (surnames followed by initials throughout; do not use "and") and the complete title (in English and French titles, do not capitalize nouns, adjectives, etc.), according to the following rules and examples:

a) Articles from journals and other serial publications (e.g., Annual Reviews): author(s), year (in parentheses), title, series as abbreviated in *Bibliographic Guide for Editors and Authors* (published by the American Chemical Society), volume followed by a comma, first and last pages.

Iino, M. (1982) Inhibitory action of red light on the growth of the maize mesocotyl: evaluation of the auxin hypothesis. Planta 156, 388–395

b) Articles from non-serial collective publications (symposia volumes, encyclopedias, etc.): author(s), year (in parentheses), title followed by "In:", title of the volume, volume and/or part (vol., pt.) if appropriate, inclusive pages of article (pp.), name(s) of editor(s) followed by "ed(s).", publisher, location.

Wagner, G. (1979) Actomyosin as a basic mechanism of movement in animals and plants. In: Encyclopedia of plant physiology, N.S., vol. 7: Physiology of movements, pp. 114–126, Haupt, W., Feinleib, M.E., eds. Springer, Berlin Heidelberg New York

c) Books: author(s), year (in parentheses), title, edition (edn.) if appropriate, publisher as under *b)*.

Lüttge, U., Higinbotham, N. (1979) Transport in plants. Springer, Berlin Heidelberg New York

3. Tables

Tables should be prepared consulting a recent issue of the journal and should be numbered consecutively with Arabic numbers. Footnotes to tables should be indicated by lower-case superscript letters, beginning with [a] in each table.

4. Illustrations

The number of illustrations (line drawings, wherever possible) should be limited to the minimum needed to clarify the text. Double documentation in figures *and* tables is not acceptable. Previously published illustrations are not accepted except under special circumstances.

Requests for color illustrations can be approved only if authors agree to bear the excess costs for reproduction and printing.

All figures (photographs, graphs, diagrams) should be numbered consecutively and should be submitted as sharp, glossy, high-quality photographic prints. Figures that are to appear together should be photographed or mounted together. All figures and groups of figures should be trimmed at right angles and should be of a size permitting *direct printing:* no more than 8 cm across for column width, no more than 17 cm across for page width, no higher than 22.5 cm. (The publisher reserves the right to reduce or enlarge illustrations.)

In **line drawings,** all lines should be of uniform thickness; letters and numbers should be of professional quality and proper dimensions, approx. 2 mm high when reproduced.

Photographs should exhibit high contrast. Arrows, letters, and numbers should be inserted with template rub-on letters. If this is not possible, inscriptions should be made on a transparent overlay (not on the actual photograph). Micrographs should have an internal magnification marker; the magnification should also be stated in the legend.

Legends. Each illustration should be provided with a concise, descriptive legend. Phrases such as "For explanation, see text" should be avoided. The legends are part of the text and should be listed at the end of the typescript, starting with a new page.

5. Offprints

Seventy-five (75) offprints of each article are provided free of charge; additional copies may be ordered at cost price when the proofs are returned.

A must for all plant physiologists – by internationally recognized experts

Encyclopedia of Plant Physiology

New Series · Editors: A. Pirson, M. H. Zimmermann

Volume 13 A

Plant Carbohydrates I

Intracellular Carbohydrates
Editors: **F. A. Loewus, W. Tanner**
With contributions by numerous experts
1982. 103 figures. XXII, 918 pages
Cloth DM 298,–; approx. US $ 118.30. ISBN 3-540-11060-7

Contents: Monomeric and Oligomeric Sugars and Sugar Derivatives. – Occurrence, Metabolism, Function. – Macromolecular Carbohydrates. – Occurrence, Metabolism, Function. – Physiological Processes. – Author Index. – Species Index. – Subject Index.

Volume 13 B

Plant Carbohydrates II

Extracellular Carbohydrates
Editors: **W. Tanner, F. A. Loewus**
With contributions by numerous experts
1981. 124 figures. XXII, 769 pages
Cloth DM 268,–; approx. US $ 106.40. ISBN 3-540-11007-0

Contents: Cell Walls of Higher Plants. – Cell Walls of Algae and Fungi. – Export of Carbohydrate Material. – Cell Surface Phenomena. – Lectin-Carbohydrate Interaction. – Author Index. – Subject Index.

Volume 14 A

Nucleic Acids and Proteins in Plants I

Structure, Biochemistry and Physiology of Proteins
Editors: **D. Boulter, B. Parthier**
With contributions by numerous experts
1982. 135 figures. XX, 768 pages
Cloth DM 268,–; approx. US $ 106.40. ISBN 3-540-11008-9

In addition to its coverage of the basic aspects of plant nucleic acids and proteins, the volume deals with recent developments in genetic engineering and other applied topics, making the book a valuable reference source for agriculturalists and industrialists as well as for researchers in plant physiology and related fields.

Volume 14 B

Nucleic Acids and Proteins in Plants II

Structure, Biochemistry and Physiology of Nucleic Acids
Editors: **B. Parthier, D. Boulter**
With contributions by numerous experts
1982. 173 figures. XVIII, 774 pages
Cloth DM 268,–; approx. US $ 106.40. ISBN 3-540-11140-9

Nucleic Acids and Proteins in Plants II continues the presentation of plant genome organization and expression begun in Volume 14A. Its coverage includes chromatin, DNA structure, replication and metabolism; RNA classes, structures, synthesis, modification, function, degradation; protein structures, synthesis, function, degradation.

Volume 15 A+B

Inorganic Plant Nutrition

Editors: **A. Läuchli, R. L. Bieleski**
With contributions by numerous experts
1983. 131 figures, 98 tables. Approx. 900 pages
(In 2 parts, not available separately)
Cloth DM 338,–; approx. US $ 134.20. ISBN 3-540-12103-X

Contents: General Chapters of Inorganic Plant Nutrition. – Inorganic Nitrogen Nutrition. – Metabolism of Sulfur and Phosphorus. – General Function of Inorganic Nutrients in Growth and Metabolism. – Special Functions of Some Elements. – Synthesis and Outlook. – Author Index. – Subject Index.

Volume 16 A+B

Photomorphogenesis

Editors: **W. Shropshire, Jr., H. Mohr**
With contributions by numerous experts
1983. 173 figures, 44 tables. Approx. 900 pages
(In 2 parts, not available separately)
Cloth DM 338,–; approx. US $ 134.20. ISBN 3-540-12143-9

Photomorphogenesis is a unique compilation of information on the regulation of plant growth and development by light. Its comprehensive coverage, based on contributions by leading experts in the field, includes topics such as action spectroscopy, the nature of pigments involved in metabolic processes, and observable responses of plants to light. The book is designed for use both as an authoritative introduction to the subject as well as a handy reference to the current status of research in each of the topics covered.
